

# Hubert Zonyra

## Software Engineer

Results-driven Frontend Engineer and Full-Stack Developer currently pursuing a degree in Computer Science. Specializing in architecting high-performance web applications using the modern tech stack: React, Next.js, Tailwind CSS, and TypeScript, Express. Committed to crafting clean, efficient code that drives intuitive user experiences and measurable business value. Proven problem-solver focused on continuous learning and applying industry best practices.

## INTERNSHIP

Mar 2025 - May 2025 | Accra, Ghana

**Fihankra Comtech LTD**

*Frontend Engineer Intern*

As a Frontend Engineer Intern at Fihankra Comtech LLC (March – May 2024), I focused on building responsive and visually appealing user interfaces using React.js, TypeScript, Tailwind CSS, and Framer Motion. My work involved optimizing performance, implementing reusable component-based architectures, and ensuring smooth, intuitive user experiences. I collaborated closely with designers, backend developers, and project managers to develop scalable solutions and integrate RESTful APIs efficiently. This internship strengthened my frontend development skills and kept me current with modern web technologies like Zod for validation and seamless UI animations.

## TOOLS

Jira  
Git  
Docker  
VS Code

## PROJECTS

### *Ecommerce Website*

Having completed the Ultimate Next.js course, I have gained comprehensive expertise in full-stack web development, specifically in building production-grade e-commerce applications. This course equipped me with over 25 hours of in-depth training, where I mastered cutting-edge technologies such as Next.js, Stripe for secure payment processing, and Tailwind CSS for rapid UI development. I successfully implemented advanced features like AI-powered search with Algolia, authentication using Next Auth V5, and efficient state management with Zustand. My hands-on experience includes developing an intuitive admin dashboard and a seamless front-end shopping experience, demonstrating my ability to integrate modern best practices and deliver high-quality, scalable web solutions.

### *Agricultural Marketplace*

Noticing some gaps in cultivating and selling of farm produce in Ghana I developed this webapp to bridge that gap:

Full-stack marketplace (Next.js, React, TypeScript, Node/Express) connecting farmers, suppliers, and buyers.

Implemented REST API, JWT authentication & role-based access control; integrated payments (Paystack), image uploads (Cloudinary), and notifications (email/SMS).

Built responsive UI, client state management, product search, wishlist, cart, and profile management.

Used PostgreSQL/Prisma for data modeling and deployments to Vercel (serverless functions), with environment variable and CORS configuration.
